FILIP JORDANOSKI

AI Full-Stack Engineer

AI agents · Multi-agent orchestration · RAG & search · FastAPI + Vue

pipojordanoski@gmail.com | +389 70 207 736 | Skopje, North Macedonia (remote)
linkedin.com/in/pipojordanoski | github.com/Pipzzter | upwork.com/freelancers/pipo

PROFESSIONAL SUMMARY

AI full-stack engineer who builds production LLM systems: multi-agent orchestration with LangGraph, AI agents with tool calling, RAG and hybrid search, and Claude skill pipelines, on FastAPI, PostgreSQL and Vue. Freelancing on Upwork since February 2026 with 5-star client reviews, after AI engineering roles at YipYap and Cognirum. Builds for reliability (retries and model fallback, checkpointed runs, schema-validated output, human review where errors compound) and owns delivery from architecture to deployment.

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, SQL, PHP
AI & LLMs	OpenAI, Anthropic Claude, Gemini, Grok, DeepSeek · LangGraph, LangChain · RAG, hybrid search (BM25 + vectors), pgvector, sentence-transformers · tool calling, structured output (Pydantic) · Claude Skills · prompt engineering
Backend	FastAPI, async SQLAlchemy, Alembic, Pydantic, Socket.IO, Node.js, Deno, Django, REST APIs
Frontend	Vue 3, TypeScript, Vite, Pinia, Tailwind CSS, React, Nuxt.js
Data	PostgreSQL (full-text search, pgvector), SQLite, Prisma
DevOps	Docker, GitHub Actions CI/CD, Caddy, Nginx, DigitalOcean, Render, Cloudflare Tunnels, pytest, Ruff, pre-commit
Platforms	Base44, Claude Code, GitHub Copilot, Shopify GraphQL, Make.com, n8n, Stripe, Framer, Selenium, Scrapy

WORK EXPERIENCE

Freelance AI Full-Stack Engineer · Upwork · Remote — February 2026 – Present

- **SornAI, SEO & AI-visibility strategy agent** (Sorn, SEO agency · Jun – Sep 2026): replaced the agency's brittle strategy prompt with a Claude skill chain (an orchestrator and 12 stage skills) that turns Search Console, Ahrefs, GA4 and crawl exports into a client-ready strategy (.docx) and an E-E-A-T audit, with two human-review checkpoints, deterministic figures and a 29-rule guardrail contract against invented data.
- **OTTO, AI buyer's agent** (Think Auto, Australian car-buying platform · Jun 2026 – Present): AI agent on Base44 that routes each shopper's request to the right tool (vehicle search, valuation, market pricing, lead capture) with fallbacks, typo tolerance and banded prices; ongoing work on the platform's flows, Deno backend functions and admin CRM.
- **Hybrid search & research overviews** (Faculti, academic video platform · Feb 2026 · walkthrough): hybrid search in the client's PostgreSQL (full-text + pgvector with HNSW) with a category-first stage, intent detection and weighted ranking across 6,000+ expert videos, 500k+ clips and papers, plus an LLM overview grounded in the results.

- **Multi-agent e-commerce orchestrator** (EverCart AI · Mar 2026): orchestrator foundation with Postgres checkpointing and a Grok → Claude fallback, driven by a JSON workflow; since published as StoreForge AI.
- **Landing-page automation** (Growevity, e-commerce · Feb – Mar 2026): copy-injection agent that fills HTML landing-page templates from raw copy, with dynamic sections and generated images; rebuilt the client's five templates.

YipYap · Remote · Embeddable AI agent SaaS platform — October 2025 – February 2026

AI Full-Stack Engineer

- Built the platform where businesses turn their own files and web pages into AI agents and embed them on any site with one <script> tag (Intercom-style).
- Agent builder and ingestion: system prompts, uploads and URLs into per-agent knowledge bases; document processing for PDF, DOCX, CSV, TXT, MD and JPG; web-page scraping and indexing.
- Provider-agnostic Model Factory with tool calling, hybrid RAG (BM25 + vectors), token-by-token Socket.IO streaming, and a multi-tenant FastAPI + PostgreSQL backend with per-tenant token tracking.

Stack: FastAPI · Vue 3 · PostgreSQL · Docker · Socket.IO · LangChain

Cognirum · Skopje, North Macedonia · AI support copilot

AI Full-Stack Engineer — February 2025 – September 2025

- Built the internal AI Support Copilot used by the customer support team, end to end on FastAPI, PostgreSQL, LangChain and Vue.js.
- Agentic tool calling that runs SQL against operational databases (order status, shipment tracking, user lookups); hybrid RAG (BM25 + dense vectors) over policies and SOPs; a dashboard showing the agent's reasoning steps and tool calls.

AI R&D Intern — August 2024 – January 2025

- RAG benchmarking system (chunking strategies, retrieval algorithms, generation quality) and the company's first hybrid search prototype (BM25 + dense embeddings), with tuned chunk size, overlap, top-k and similarity thresholds.

Involve · Skopje, North Macedonia

Junior Web Developer — March 2024 – May 2024

- Admin panel improvements across frontend and backend in JavaScript and PHP.

Web Scraping Engineer — July 2023 – September 2023

- Scraping pipelines with Selenium and Scrapy, including anti-bot handling, delivering clean, structured data.

PROJECTS

StoreForge AI — github.com/Pipzzter/storeforge

Multi-agent system: a founder's five-question intake becomes a 7-day launch plan, a sourced product line with margins and the Shopify GraphQL code for the store; Claude / Grok routing with retries and fallback, Postgres checkpoints so runs resume, 52 tests that run without API keys.

LangGraph · FastAPI · PostgreSQL · Claude · Grok

PaperMind

github.com/Pipzzter/papermind

RAG study platform: PDFs and notes become shared Knowledge Spaces, answers cite the exact source page, retrieval is hybrid and permission-aware, and the same material generates study guides, graded quizzes and spaced-repetition flashcards.

FastAPI · Vue 3 · PostgreSQL + pgvector · Gemini · OpenAI

Advertly

github.com/Pipzzter/advertly

Raw advertorial copy in, a publishable landing page out: Gemini extracts typed sections, deterministic code fills the HTML template, and Gemini image generation fills every image slot.

FastAPI · Gemini 2.5 Flash + Image · Vue 3 · Docker

Sostojka

github.com/Pipzzter/sostojka

Agentic entity linking of Macedonian recipe ingredients to USDA FoodData Central: a five-stage, tool-using pipeline that shows every reasoning step and confidence (implements the method from Darko Gjorgjievski's thesis).

Python · FastAPI · OpenAI tool calling

Nedelko

github.com/Pipzzter/nedelko

Team of three, 3-day hackathon: an AI weekly planner for kindergarten teachers with bilingual plans under strict schema validation and live air-quality and weather data that move lessons indoors; 249 tests, SonarQube quality gate.

Node.js · Preact · SQLite · OpenAI

FastAPI + Vue Starter

github.com/Pipzzter/fastapi-vue-starter

Production starter: JWT auth with Argon2, async SQLAlchemy with Alembic migrations, rate limiting, health probes, multi-stage Docker builds, Ruff, pytest and CI from the first commit.

FastAPI · Vue 3 · Docker · GitHub Actions

Brza Faktura

brzafaktura.mk

Live e-invoicing SaaS for Macedonian businesses, built solo (private repo): multi-tenant organizations with team roles, email and Google sign-in, invoices, and company verification plus official codelists through the tax authority's (UJP) API, with e-invoice submission in progress; English, Macedonian and Albanian UI.

FastAPI · Vue 3 · PostgreSQL · Docker · Caddy

EDUCATION

Faculty of Computer Science and Engineering (FINKI), Ss. Cyril and Methodius University in Skopje
B.Sc. in Computer Science, 2023 – 2027 (expected)
